Entac LED lights are high performance LEDs replacing traditional lightbulbs. They are the perfect option for replacing lighting solutions at home, available in numerous decorative forms with an E14 and E27 screw base. They are offered in three different color temperatures, 3000 K warm , 4000 K neutral and 6500 K cool, in a 6.5W version. Due to their low power consumption and long service life they result in significant savings. They do not flash, protecting the eyes this way. Switching them on and off does not shorten their service life.

LED lights do not emit light by heating up a metal filament but by means of electrons, thus they have a minimal heat loss. You can save up to 80% energy compared to traditional light bulbs when using LED technology. LED lights produce minimal heat, thus they can also be used at places where heating might represent a hazard.

The Entac lighting technology category includes numerous other products. Learn more about these on the following [link](#).
