Entac spotlights are light sources with an identical size to traditional halogen spotlight bulbs offering a wide lighting angle. Due to its plastic and aluminum casing it has excellent heat dissipation characteristics, which makes it perfectly suitable for intensive use. They are offered in three different color temperatures, 3000 K warm, 4000 K neutral and 6400 K cool, with a GU10 screw base and 4W and 6.5W power version.

LED lights do not emit light by heating up a metal filament but by means of electrons, thus they have a minimal heat loss. You can save up to 80% energy compared to traditional light bulbs when using LED technology. LED lights produce minimal heat, thus they can also be used at places where heating might represent a hazard.

The Entac lighting technology category includes numerous other products. Learn more about these on the following link.
